

Project Report Format

1. INTRODUCTION

Food, substance consisting essentially of protein, carbohydrate, fat, and other nutrients used in the body of an organism to sustain growth and vital processes and to furnish energy. The absorption and utilization of food by the body is fundamental to nutrition and is facilitated by digestion.

1.1 Project Overview

AI and its various subsets have been leveraged by these platforms to identify the calorie intake and also to make food recommendations for a healthy diet. In most cases, what we see is that these platforms act as a data repository where while providing real-time information to its users, it also makes available to numerous clients who work in this field for a determined rate. In this article, we take a look at the top AI-based online platforms which make use of AI and other deep learning technologies to provide a real-time updates about nutrition intake. The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like color, shape.

1.2 Purpose

The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).

2. LITERATURE SURVEY

2.1 Existing problem

Poor nutrition can contribute to stress, tiredness and our capacity to work, and over time, it can contribute to the risk of developing some illnesses and other health problems such as: being overweight or obese. Tooth decay ,high blood pressure. There are now strong links between low intakes of particular nutrients and the risk of developing chronic disease including some cancers, heart disease, diabetes, osteoporosis and depression. During pregnancy, insufficient nutrient intake can have long-term health implications for the health of the child.

2.3 Problem Statement Definition

It's important to start within your abilities and listen to your body's cues in terms of pain and injury. Obesity is a common health issue that is defined by having a high percentage of body fat. Being overweight or obese increases your chances of dying from hypertension, coronary heart disease, sleep apnea, and endometrial, breast, prostate, and colon cancers. Junk foods are high in calorie but low in nutrition value and lead to an excess metabolic weight leading to obesity. An obese individual is prone to life-threatening diseases which are not only limited to cholesterol or diabetes but also can cause stroke and NCDs. Overtraining may wear down the immune system. It increases cardiovascular stress. Incorrect workouts may cause sprains, strains, fracture and other painful injury.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

[illegible]

3.3 Proposed Solution

S.NO	PARAMETER	DESCRIPTION
1	Problem Statement (Problem to be solved)	How to intake suitable nutrition with correct guidance and weight level should be managed through tracking our day to day fitness.
2	Idea / Solution Description	To track fitness level and Analyze the nutrition level of foods like fruits , vegetables . It helps to identify the proportion of vitamins.
3	Novelty/Uniqueness	Giving a individual Food/health Schedule According to their body conditions
4	Social impact/Customer Satisfaction	Low expenditure ,easy to follow without affecting their personal time.
5	Business model (Revenue Model)	Free platform for all users. For specific guidance users want to pay
6	Scalability of the solution	Notifying motivational quote's to lead a healthy routine

3.4 Problem Solution fit

Problem-Solution fit canvas 2.0		Purpose / Vision	
Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0 to 5 y.o. kids <ul style="list-style-type: none"> People who want to fit their body and maintain proper or balanced diet in a proper way 	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, internet connection, available devices <ul style="list-style-type: none"> constraints may contribute to the unhealthy food choices observed among low socioeconomic groups in industrialized countries. 	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking <ul style="list-style-type: none"> Try to eat more protein and fat, and less simple sugars. Ask your doctor or dietitian about nutritional supplements. Avoid non-nutritious beverages
			Explore AS, differentiate
Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs to be done (or problems) do you address for your customers? There could be more than one, explore different sides. <ul style="list-style-type: none"> Being a holistic wellness coach, registered dietitian, nutritionist, Food scientist, nutrition educator are the job can successfully done in this field 	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations <ul style="list-style-type: none"> Lack of appetite, or decreased hunger A sore mouth or throat can make eating difficult Undiet plan in untimed eating 	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer; calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) <ul style="list-style-type: none"> the sum of all planned, spontaneous, or habitual actions of individuals or social groups to procure, prepare, and consume food as well as those actions related to storage and clearance.
			Focus on J&P, tap into BE, understand RC
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news <ul style="list-style-type: none"> Antigens are substances that the body labels as foreign and harmful, which triggers immune cell activity. 	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fit in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour <ul style="list-style-type: none"> In our platform we provide a individual healthy chart for subscribers Normally Common health diet plan was allocated Seek your way on organic side and stay healthy 	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 <ul style="list-style-type: none"> Refer journal through online applications, attending some online session, following healthy remedies.
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: Initially they felt intensely complex by their own. And felt more negative thoughts and underestimate themselves. After: After the correct solution they had a great confidence among themselves And active their healthy diet.		
		Extract online & offline CH of BE

4.REQUIREMENT ANALYSIS

4.1Functional requirement

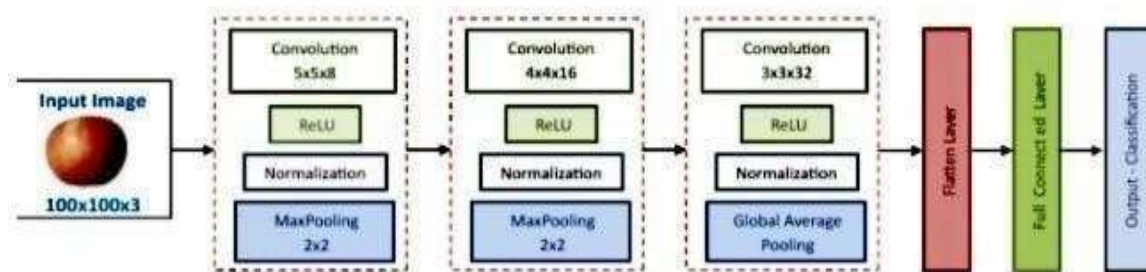

- It will generate the diet plan as well as monitor the user's health to classify the category of the disease and to create the diet plan. It will also reduce the cost of consulting the person nutritionist.
- The task of food detection/classification is not easy as it seems. All possible options related to the given Image.

- 1.Image classification, object detection, segmentation, face recognition.
- 2.Classification of crystal structure using a convolutional neural network.

- Computer-Assisted Nutritional Recognize Food Images – In order to solve this issue, a brand-new Convolutional Neural Network (CNN)- based food picture identification system was created, as described in this study. We utilized our suggested strategy on two sets of actual food picture data.
- Here the user can capture the images of different fruits and then the image will be sent to the trained model. The model analyzes the image and detects the nutrition based on the fruits like (Sugar, Fiber, Protein, Calories, etc.)
- The Ultimate Workout at Home Solution This fitness AI software is designed with personalized training regimens for each individual. It began as “gym only software,” but has now improved its system to satisfy “at home fitness” expectations.
- You take a picture, dial in data such as whether you are eating breakfast or lunch and add a quick text label, and the app estimates the calorie content.

This software collaborated with IBM's natural language capability to provide 24-hour assistance and dietary recommendations.

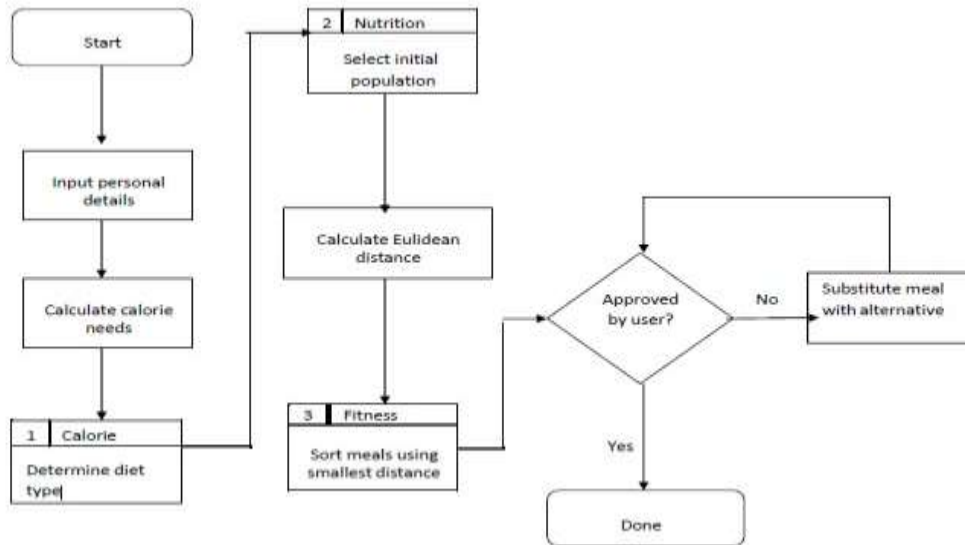

For Example:

- The comparison of the proposed model with the conventional models shows that the results of this model are exceptionally good and promising to use in real-world applications. This sort of higher accuracy and precision will work to boost the machine's general efficiency in fruit recognition more appropriately.
- A generic model for the dietary protein requirement (as with any nutrient) defines the requirement in terms of the needs of the organism,
- i.e. metabolic demands, and the dietary amount which will satisfy those needs, i.e. efficiency of utilization, thus: dietary requirement = metabolic demand/efficiency of utilization.

5.PROJECT DESIGN

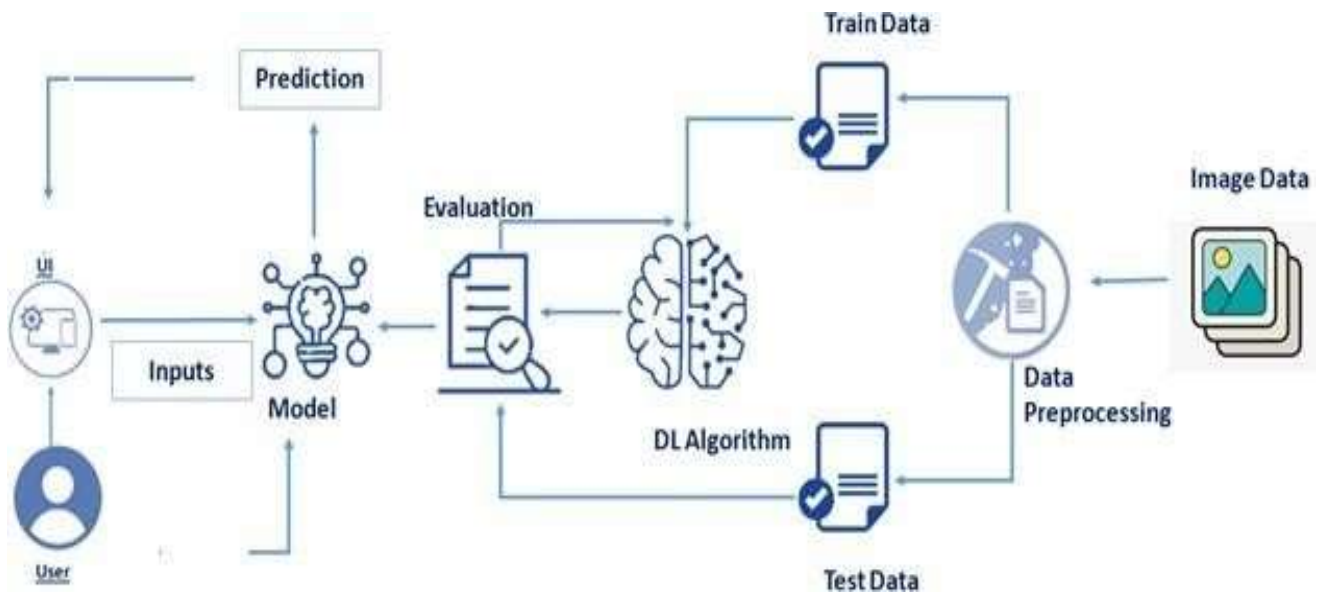

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

- Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.
- Nutritional analysis is the process of determining the nutritional content of food.
- The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc.
- Food is essential for human life and has been the concern of many healthcare conventions.
- It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality

control and contamination of food.

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	03 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	10 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	17 Nov 2022

6.2 Sprint Delivery Schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Collection	USN-1	Download Food Nutrition Dataset	2	Medium	KAVIARASAN
Sprint-1	Data Preprocessing	USN-2	Importing The Dataset into Workspace	1	Low	KAVIYA
Sprint-1		USN-3	Handling Missing Data	3	Medium	NANDHINI
Sprint-1		USN-4	Feature Scaling	3	Low	PRABA
Sprint-1		USN-5	Data Visualization	3	Medium	KAVIYA
Sprint-1		USN-6	Splitting Data into Train and Test	4	High	KAVIARASAN
Sprint-1		USN-7	Creating A Dataset with Sliding Windows	4	High	JOHN PAUL
Sprint-2	Model Building	USN-8	Importing The Model Building Libraries	1	Medium	NANDHINI
Sprint-2		USN-9	Initializing The Model	1	Medium	JOHN PAUL

Sprint-2		USN-10	Adding LSTM Layers	2	High	KAVIARASAN
Sprint-2		USN-11	Adding Output Layers	3	Medium	NANDHINI
Sprint-2		USN-12	Configure The Learning Process	4	High	PRABA
Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2		USN-13	Train The Model	2	Medium	JOHN PAUL
Sprint-2		USN-14	Model Evaluation	1	Medium	KAVIYA
Sprint-2		USN-15	Save The Model	2	Medium	KAVIARASAN
Sprint-2		USN-16	Test The Model	3	High	PRABA
Sprint-3	Application Building	USN-17	Create An HTML File	4	Medium	NANDHINI
Sprint-3		USN-18	Build Python Code	4	High	KAVIARASAN
Sprint-3		USN-19	Run The App in Local Browser	4	Medium	PRABA
Sprint-3		USN-20	Showcasing Prediction On UI	4	High	JOHN PAUL
Sprint-4	Train The Model On IBM	USN-21	Register For IBM Cloud	4	Medium	NANDHINI
Sprint-4		USN-22	Train The ML Model On IBM	8	High	KAVIYA
Sprint-4		USN-23	Integrate Flask with Scoring End Point	8	High	PRABA

7.CODING & SOLUTIONING (Explain the features added in the project along with code)

7.1 Feature 1

Data Collection

Download the dataset [here](#)

```
[ ] from google.colab import drive
    drive.mount('/content/drive')

Mounted at /content/drive

[ ] cd /content/drive/MyDrive/Colab Notebooks

/content/drive/MyDrive/Colab Notebooks

[ ] # Unzipping the dataset
    !unzip 'Dataset.zip'
```

Image Preprocessing

```
[ ] from keras.preprocessing.image import ImageDataGenerator
```

Image Data Augmentation

```
[ ] train_datagen = ImageDataGenerator(rescale=1./255, shear_range=0.2, zoom_range=0.2, horizontal_flip=True)
    test_datagen = ImageDataGenerator(rescale=1./255)
```

Applying Image DataGenerator Functionality To Trainset And Testset

```
▶ x_train = train_datagen.flow_from_directory(
    r'/content/drive/MyDrive/Colab Notebooks/Dataset/TRAIN_SET',
    target_size=(64, 64), batch_size=5, color_mode='rgb', class_mode='sparse')
x_test = test_datagen.flow_from_directory(
    r'/content/drive/MyDrive/Colab Notebooks/Dataset/TEST_SET',
    target_size=(64, 64), batch_size=5, color_mode='rgb', class_mode='sparse')
```

3. Adding CNN Layers

```
[ ] classifier = Sequential()
classifier.add(Conv2D(32, (3, 3), input_shape=(64, 64, 3), activation='relu'))
classifier.add(MaxPooling2D(pool_size=(2, 2)))
classifier.add(Conv2D(32, (3, 3), activation='relu'))
classifier.add(MaxPooling2D(pool_size=(2, 2)))
classifier.add(Flatten())
```

4. Adding Dense Layers

```
[ ] classifier.add(Dense(units=128, activation='relu'))
classifier.add(Dense(units=5, activation='softmax'))
```

 classifier.summary()

Model: "sequential_1"

Layer (type)	Output Shape	Param #
conv2d (Conv2D)	(None, 62, 62, 32)	896

5. Configure The Learning Process

```
[ ] classifier.compile(optimizer='adam', loss='sparse_categorical_crossentropy', metrics=['accuracy'])
```

6. Train The Model

```
[ ] classifier.fit_generator(generator=x_train, steps_per_epoch = len(x_train), epochs=20, validation_data=x_test, validation_steps = len(x_test))
```

/usr/local/lib/python3.7/dist-packages/ipykernel_launcher.py:2: UserWarning: 'Model.fit_generator' is deprecated and will be removed in a future version. #1

Epoch 1/20

494/824 [=====] - ETA: 6:52 - loss: 0.7194 - accuracy: 0.7174

7. Saving The Model

```
[ ] classifier.save('nutrition.h5')
```

8. Testing The Model

```
[ ] from tensorflow.keras.models import load_model
from keras.preprocessing import image
model = load_model("nutrition.h5")
```

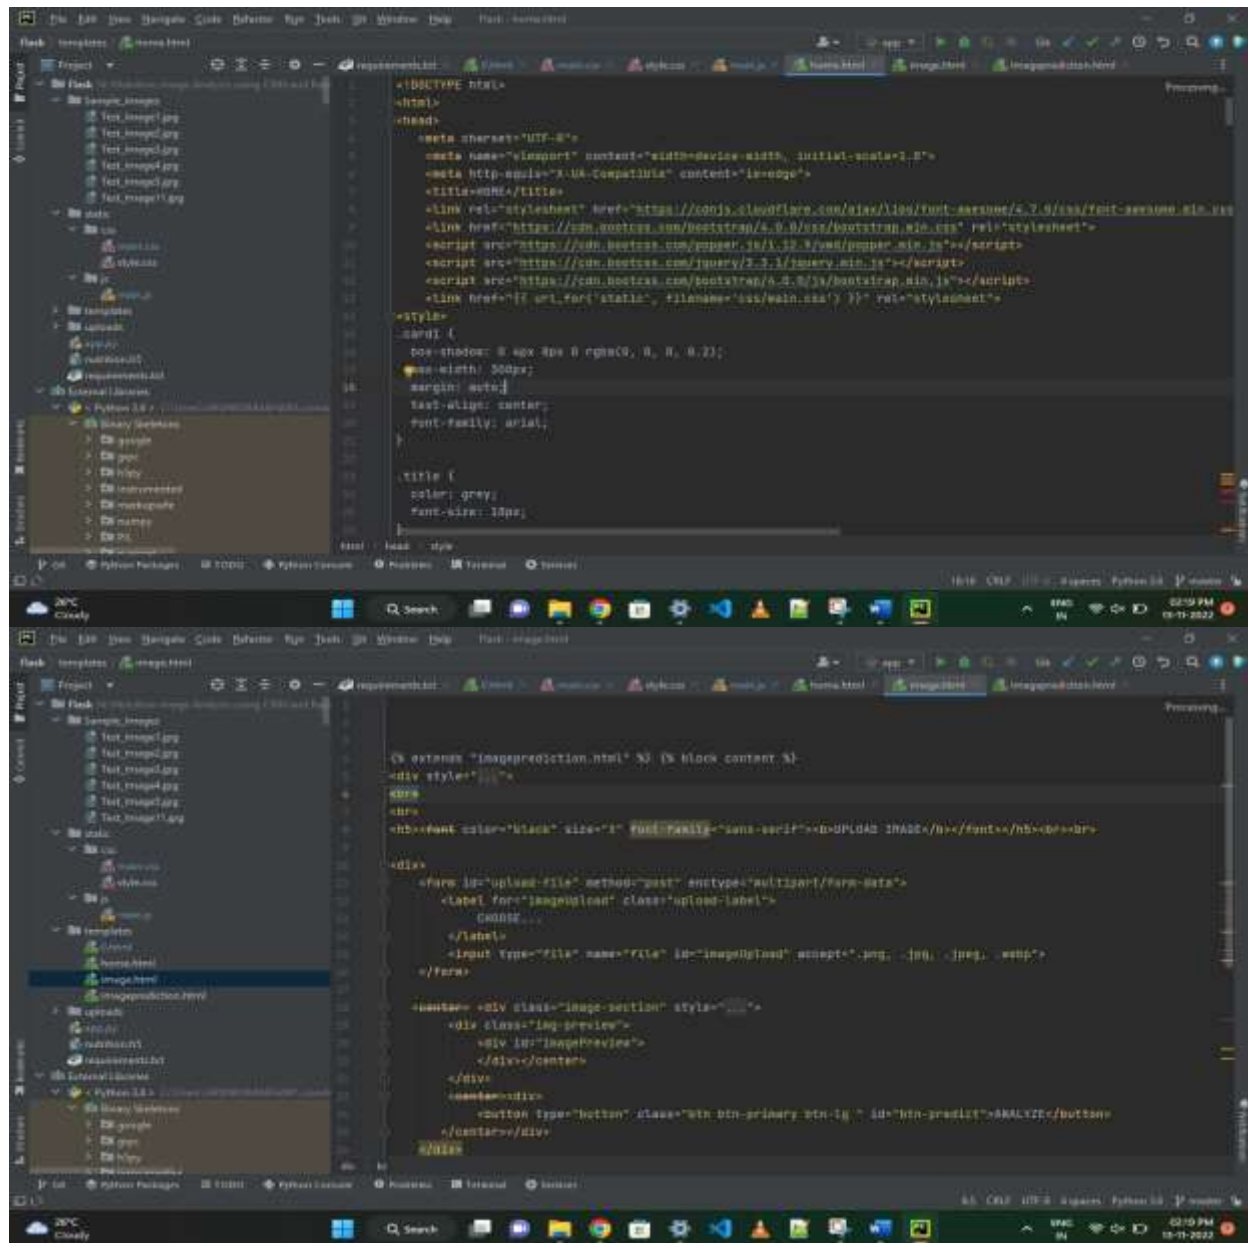

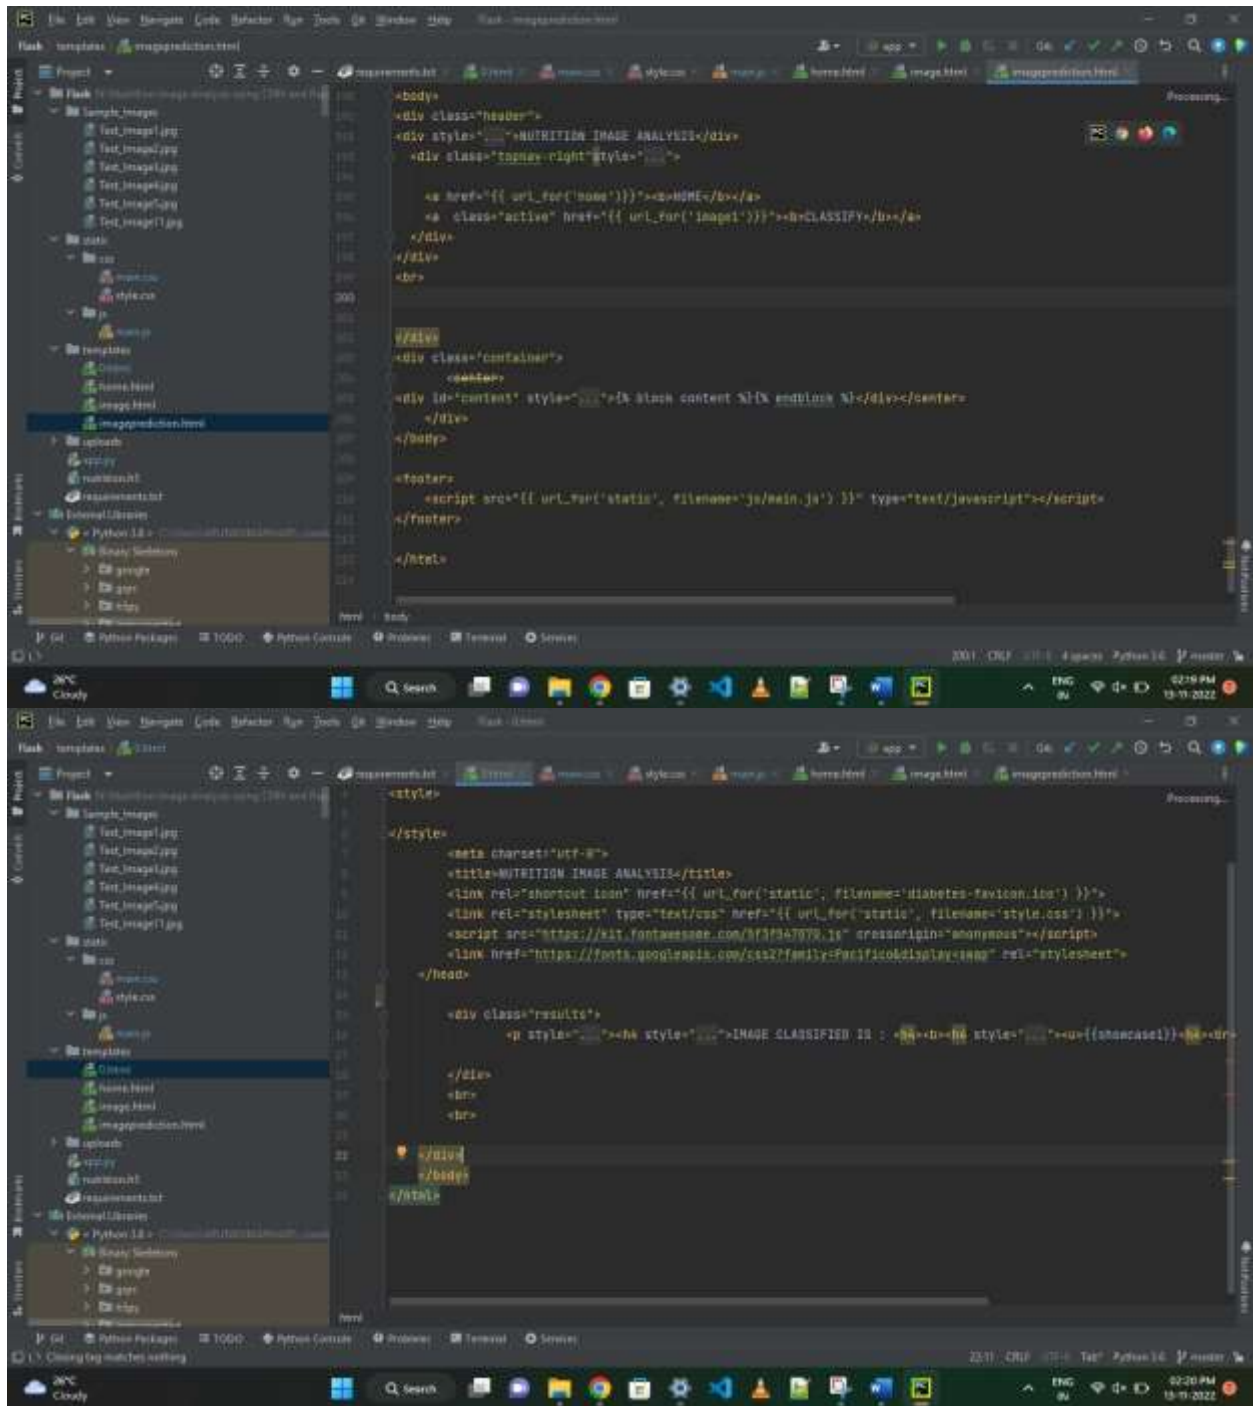

```
from tensorflow.keras.models import load_model
from tensorflow.keras.preprocessing import image
model = load_model("nutrition.h5")
img = image.load_img(r'/content/drive/MyDrive/Colab Notebooks/Sample Images/Test_Images1.jpg', grayscale=False, target_size=(64,64))
x = img_to_array(img)
x = np.expand_dims(x,axis = 0)
predict_x=model.predict(x)
classes_x=np.argmax(predict_x,axis=-1)
classes_x
```

1/1 [=====] -- 0s. 62ms/step
array([0])

```
[ ] Index=['APPLES', 'BANANA', 'ORANGE', 'PINEAPPLE', 'WATERMELON']
result=str(Index[classes_x[0]])
result
```

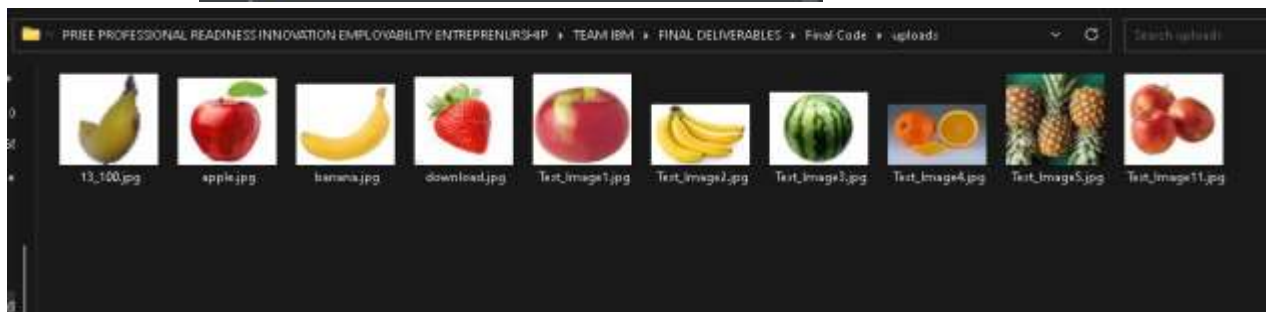

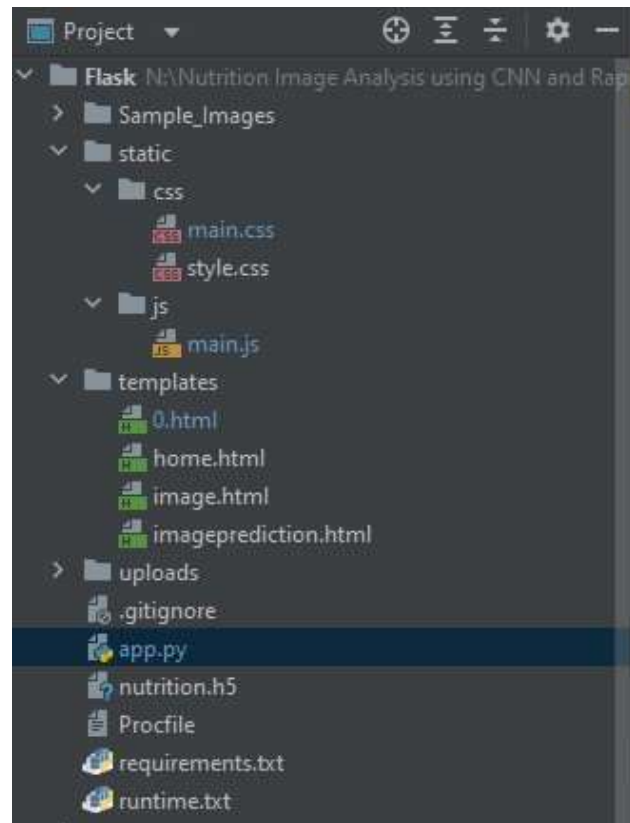

7.2Feature 2

8.TESTING

8.1 Test Cases

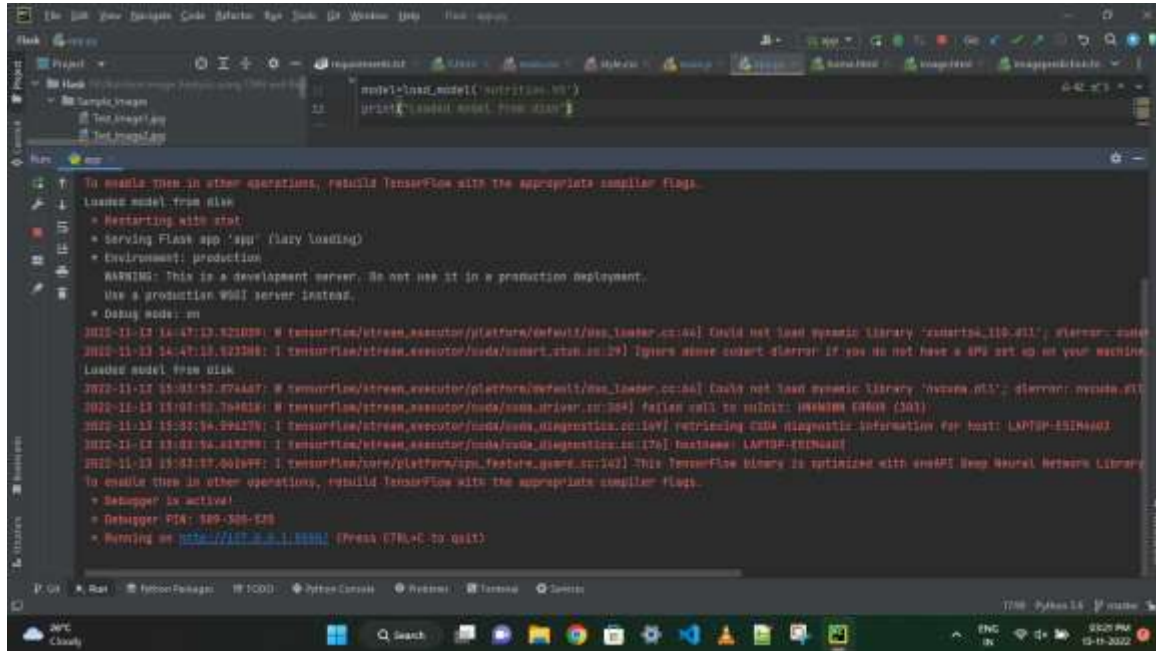

8.2 User Acceptance Testing

9.RESULTS

9.1 Performance Metrics

```
model_loaded_model('nutrition_05')
print('Loaded model from disk')
```

To enable them in other operations, rebuild TensorFlow with the appropriate compiler flags.

Loaded model from disk

- Restarting with stat
- Serving Flask app 'app' (lazy loading)
- Environment: production
- WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
- Debug mode: on

- Debugger is active!
- Debugger PID: 589-588-125
- Running on <http://127.0.0.1:5050/> (Press CTRL+C to quit)

10.ADVANTAGES

- Advantages-Nowadays new dietary assessment and nutrition analysis tools enable more opportunities
- To help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet.
- Nutritional analysis is the process of determining the nutritional content of food.

11.CONCLUSION

- Thus powered nutrition analyzer for fitness enthusiasts good nutrition promotes not only better physical healthy and reduced susceptibility to disease, but has also been demonstrated to contribute to cognitive development and academic success.
- Left to their own devices, children will not automatically select healthy food.
- A balance diet and appropriate meal timings are important for healthy body and mind.
- Most countries nowadays implement health education program in schools which include feeding to students, vitamin and mineral supplementation.

12.FUTURE SCOPE

- AI is revolutionizing the health industry.
- It is majorly used in improving marketing and sales decisions.
- AI is now also being used to reshape individual habits.
- In future we don't want to go to gym and do any diets.
- By using this nutrition fitness analyzer we can maintain our diet plans without any help from others and we can lead a happy and healthy life with good wealth.
- AI can easily track health behaviors and repetitive exercise patterns and use the data to guide you towards your fitness journey and diet plans.

13.APPENDIX

GitHub & Project Demo Link
